

POWERTEX UNIVERSAL MEDIUM

CONSERVATION

 Powertex Universal Medium is a waterbased liquid.
Store it in a room temperature with minimum +5 degrees.
Preferably min. 18 degrees = more comfortable to work with.

ONCE BOTTLE WAS OPENED

 avoid vaporation of water = thickening of the liquid
due to heating, sun, hairdryers, not well closed, ...

whilst in work modus / storing the container
MAKE SURE YOU ALWAYS

 close the lid of the bottle very well,
take the effort / make a habbit of it doing so,
even if that means you have to re-open/close it every so often

 put a plastic foil between the bottle and the lid
(will also make it easier to open next time you want to use it)

when lid is very well closed, store bottle upside down
= hermetically sealed = no vapo possible
= longer/better conservation
